

What's That on Your Bottom?

Is there Copper Paint on your boat bottom? If so, then you are contributing to the destruction of our local marine life!

The California Regional Water Quality Board (RWQCB) has found that copper based hull coatings contribute over 90% of the copper pollution in the Shelter Island Yacht Basin!

That's definitely something to think about the next time you look down to your dinner plate.

Do your part! When you repaint your boat, use Non-Copper Paint!
